

TASK 10 – DOCUMENTATION & SUBMISSION

1. About the Dataset Chosen

This project uses three CSV files to analyze sales performance and target achievement.

Datasets Used

- List of Orders.csv: Contains order-level information such as Order ID, Order Date, Customer Name, State, and city.
- Order Details.csv: Includes product-level details like Order Id, Name, Amount, Category, Sub-Category, Quantity, Profit.
- Sales Target.csv: Category, targets, Order Date.

Objective

To build an interactive sales dashboard that tracks overall performance, compares actual sales against targets, and provides actionable business insights.

2. Data Cleaning Steps

Data cleaning was performed in **Power BI Power Query Editor**.

Cleaning Activities

- **Removed duplicate records**
Identified and removed repeated Order IDs and Product entries.
- **Checked and handled missing/null values**
Replaced blank numeric fields with mean values(e.g ,amount,profit)
- **Standardized date formats**
- Renamed columns for clarity
- Changed data types (Date, Currency, Whole Number)
- Filtered unnecessary columns

These steps ensured data accuracy and consistency before modeling.

3. Data Model

The data model follows a **star schema** design.

Relationships

- List of Orders[Order ID] → Order Details[Order ID] (One-to-Many)
- Sales Target[Date] → List of Orders[Order Date]

4. DAX Measures Created

The following DAX measures were created to support analysis:

Total Sales = SUM('Order Details'[Sales])

Total Profit = SUM('Order Details'[Profit])

Sales Target = SUM('Sales Target'[Target Amount])

Target Achievement % =

DIVIDE([Total Sales], [Sales Target], 0) * 100

YoY Sales Growth % =

```
DIVIDE(  
[Total Sales] - CALCULATE([Total Sales], SAMEPERIODLASTYEAR('List of  
Orders'[Order Date])),  
CALCULATE([Total Sales], SAMEPERIODLASTYEAR('List of Orders'[Order Date]))  
) * 100
```

These measures were used in KPIs, charts, and conditional formatting.

5. Insights Discovered

Key insights derived from the dashboard include:

- Sales increased steadily over time with noticeable seasonal trends
- Certain regions consistently exceeded sales targets
- Some product categories showed high sales but low profitability
- Top 5 customers contributed a significant portion of total revenue
- Discounts had a direct impact on profit margins

These insights can help management optimize pricing, inventory, and regional strategies.
